DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 09/11/01 have been fully considered but they are not persuasive.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 102(e) as being anticipated by *Keskitalo et al.* (5,893,033).

As per claims 1 and 5, *Keskitalo et al.* disclosed a method for determining the position of a mobile terminal (fig. 4/no. 308) in a coverage area of a base station of a radio system for using location information, in which the base station comprises equipments for receiving/measuring/comparing the signals received from the same mobile station simultaneously by at least two antenna beams (fig. 4/no. 310,312,314,316) directed in different directions, wherein the base station defining a timing advance for a time lag caused by the distance between the mobile station and

Art Unit: 2684

the base station, determining the direction of the mobile station, calculating the distance between the base station and the mobile station on the basis of the timing advance defined for the mobile station and the propagation speed of the radio signals, and based upon the calculation a decision is made as to whether or not the mobile station should be transferred to another base station by a handover (abstract, fig. 4, col. 8/ln. 12-col. 10/ln. 33).

As per claims 2 and 6, *Keskitalo et al.* further disclosed calculating for each beam the mean value of the signal levels of the signals received from the mobile station by the respective antenna beams (fig. 5, col. 7/ln. 46-col. 8/ln. 11).

As per claims 3 and 7, *Keskitalo et al.* further disclosed choosing the antenna beam with the strongest signal level and at least one adjacent beam (col. 8/ln. 12-col. 10/ln. 33).

As per claim 8, *Keskitalo et al.* further disclosed said base station is a base station of a cellular radio system divided into logical traffic channels in accordance with a TDMA principle (col. 1/ln. 22-30).

Allowable Subject Matter

4. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
